

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-14 (Canceled).

Claim 15 (New): A method for operating a display device, comprising:
generating user position information of a user in relation to a display of said display device, wherein said user position information is descriptive of a distance of the user with respect to said display;
changing a display mode for displaying information on said display depending on said user position information, wherein in said display mode an amount of said displayed information depends on said user position information; and
displaying said information on said display based on said display mode.

Claim 16 (New): The method of claim 15, wherein, if said user is in a first position said information includes a first amount of text, and if said user is in a second position said information includes a second amount of text, wherein said first position represents a closer position to said display than said second position and said first amount of text is larger than said second amount of text.

Claim 17 (New): The method of claim 16, wherein said first and second amount of text is determined based on re-phrasing said first and second amount of text.

Claim 18 (New): The method of claim 15, wherein, if said user is in a first position said information includes a first amount of semantic content, and if said user is a second position said information includes a second amount of semantic content, wherein said first

position represents a closer position to said display than said second position and said first amount of semantic content is larger than said second amount of semantic content.

Claim 19 (New): A computer readable medium including computer program instructions that cause a computer to execute a method for operating a display device, comprising:

generating user position information of a user in relation to a display of said display device, wherein said user position information is descriptive of a distance of the user with respect to said display;

changing a display mode for displaying information on said display depending on said user position information, wherein in said display mode an amount of said displayed information depends on said user position information; and

displaying said information on said display based on said display mode.

Claim 20 (New): A display device comprising:

a display configured to display information;

a distance sensor configured to determine a distance of a user to said display;

a data processor configured to determine information to be displayed on said display, wherein an amount of said information depends on said distance.

Claim 21 (New): The device of claim 20, wherein, if said user is in a first position said information includes a first amount of text, and if said user is in a second position said information includes a second amount of semantic content, wherein said first position represents a closer position to said display than said second position and said first amount of text is larger than said second amount of text.

Claim 22 (New): The device of claim 21, wherein said first and second amount of text is determined based on re-phrasing said first and second amount.

Claim 23 (New): The device of claim 22, wherein, if said user is in a first position said information includes a first amount of semantic content, and if said user is a second position said information includes a second amount of semantic content, wherein said first position represents a closer position to said display than said second position and said first amount of semantic content is larger than said second amount of semantic content.
